USES
The Plasma Control normal is designed to be used as control of the determination of prothrombin time, thrombin time, activated partial thromboplastin time and fibrinogen.

PROVIDED REAGENTS
Normal Control: lyophilized pool of normal human plasmas obtained with citrate as anticoagulant.

NON-PROVIDED REAGENTS
Bidistilled or deionized water.

INSTRUCTIONS FOR USE
Reconstitute each vial with 1.0 ml bidistilled or deionized water. Allow this material to dissolve for 20 minutes at room temperature, mixing without inversion. Make sure that all particles are completely dissolved.

WARNINGS
Reagent is for “in vitro” diagnostic use. The normal control has been prepared from material non-reactive for HBsAg, HCV and HIV. However, the control and all other blood samples should be handled as potentially infectious biological material. Use the reagents according to the working procedures for clinical laboratories. The reagents and samples should be discarded according to the local regulations in force.

STABILITY AND STORAGE INSTRUCTIONS
The reagent is stable in refrigerator (2-10°C) until the expiration date indicated on the box. Once reconstituted, it is stable for 8 hours both at room temperature and refrigerated (2-10°C).

INSTABILITY OR DETERIORATION OF REAGENTS
Any variation in the color of the normal control may be a sign of deterioration.

PROCEDURE LIMITATIONS
Mistakes when reconstituting the reagent may cause erroneous results. See LIMITATIONS OF THE PROCEDURE on the package insert of the kit in use.

REFERENCE VALUES
The values for prothrombin time, thrombin time, activated partial thromboplastin time and fibrinogen, using Plasma Control, depend on the reagents and coagulation analyzers in use.

WIENER LAB. PROVIDES
- 6 x 1 ml (Cat. Nº 1937001)

Symbols

The following symbols are used in the packaging for Wiener lab. diagnostic reagent kits.

- **CE**
  - This product fulfills the requirements of the European Directive 98/79 EC for "in vitro" diagnostic medical devices

- **EC REP**
  - Authorized representative in the European Community

- **IVD**
  - "In vitro" diagnostic medical device

- **Σ**
  - Contains sufficient for <n> tests
